MODERNISATION

- **IMPROVED PERFORMANCE AND RELIABILITY, CONSISTENT FLOOR LEVELS REGARDLESS OF VARIATION TO THE RATED LOAD**

The lift is the main artery for any building, reliability is an essential element for smooth day to day operation and maintaining client satisfaction.

- **AESTHETIC IMPROVEMENT**

The lift and foyer are the first point of entry and a building's primary opportunity to make an impression.

- **REGULATIONS**

An upgrade addresses many implemented regulations, for instance buttons that incorporate Braille and are at the height regulated for persons with special needs.

- **OBSOLESCENCE**

Replace ineffective, unreliable equipment with potential risks to users. Inconsistent floor levels are a potential hazard and should be upgraded.

- **POWER SAVINGS**

A quality upgrade can save a building up to 80%* of its current lift power usage. Power reductions compensate for potential electricity price increases and carbon taxation costs, immediately impacting the building's bottom line.

** Figures are based on recent tests carried out by Electra Lift Co. with results available.*

- **SPECIALISING IN REFURBISHMENTS THAT REFLECT THE BUILDING'S CHARACTER**

Whether the client requests a contemporary, heritage or art deco finish we have extensive experience, particularly in the refurbishment of old lifts. Maintaining the aesthetics of the building design is always taken into consideration during any consultation process.

- **FULLY EQUIPPED SHOWROOM**

An updated showroom at our Mascot office showcases lift interior options, car and landing control panels, automatic door upgrades plus major control components.

- **FULLY EQUIPPED WORKSHOP**

A fully equipped engineering and manufacturing workshop enables the company to be self reliant and versatile with clients' requests.
